PRESS RELEASE

HK Bonding brings latest in fiberfill for molded bra cups and fabric lamination technologies

Hong Kong, 2nd April 2009

HK Bonding brings the latest in fiberfill molded bra cups and fabric lamination technologies which will be presented at the Hong Kong Mode Lingerie show in April on the 7th to 8th at the Hong Kong Convention and Exhibition Centre.

The fiberfill products for the molded bra cups are the first in the industry that are produced using man made as well as sustainable and recycled raw materials. This creates the lightest moldable foam alternative bra cups that are breathable and able to incorporate freshness benefits through permanent moisture management as well as antibacterial technologies.

The fabric lamination process uses the most innovative environmental technologies for both simple processes such as underwear gusset applications to more complex applications such as controlling stretch of 4 way stretch fabrics. These technologies combine alongside bonded and no sewn garment techniques.

HK Bonding works with whole textile value chain by innovating and developing products based on the market need using the environmental friendly processes. Mr. Anderson Lee, Business Director of HK Bonding commented *“Our products aim to bring the latest technologies to the customers in the textile and apparel industry. By working very closely with our customers and suppliers, we are able to innovate and develop products that consumers are looking for from comfort to freshness and yet without harming the environment.”*

HK Bonding sister company of HK Non-Woven registered at 12/F Richwealth Industrial Building, 77 – 87 Wang Lung Street, Tsuen Wan, Hong Kong. Tel +852 2407 5516. Email: info@hkbonding.com.hk
